

Component Lancing Systems

The Safest Most Productive Tube Cleaning Equipment Available

StoneAge Lancing Systems are the industry standard for rigid lance cleaning of heat exchangers. These systems provide much more forward hitting power than flex lancing can and increase operator safety by removing him from the cleaning surface. Follow our four step guide to ensure you have the best set-up for your tube bundles. Helpful hint: We recommend ordering the dual or triple rotary package. They can be modified to one rotating lance, giving the system maximum versatility for different applications.

STEP 1

Rail & Extensions

Select rail and extensions long enough for sufficient cleaning stroke. See page 34.

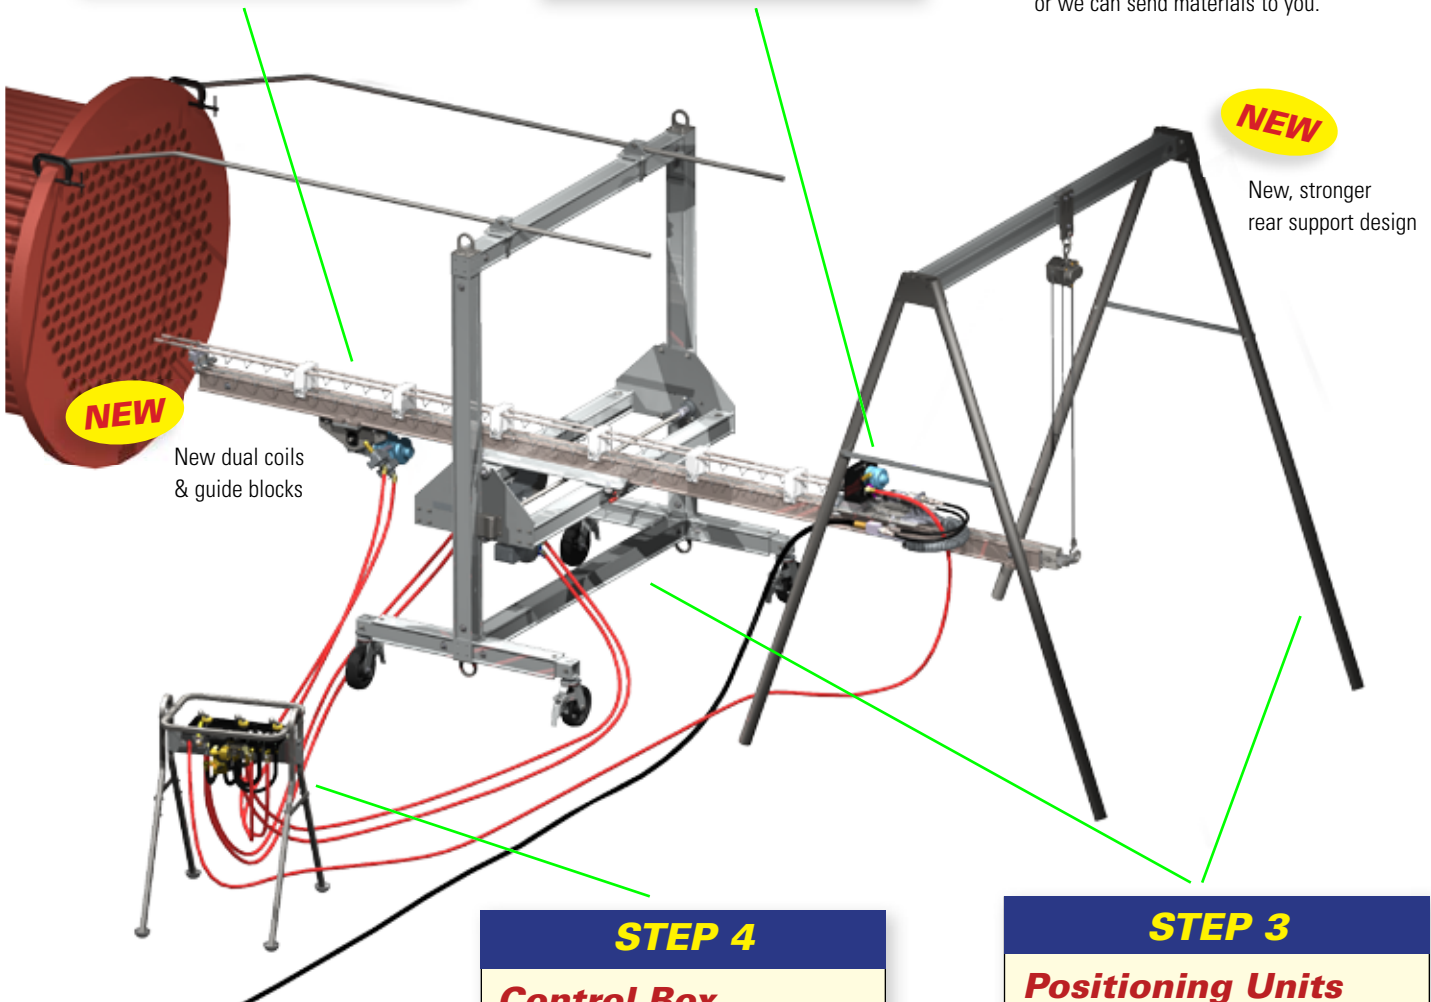

STEP 2

Power Package

Choose a 15k, 20k or 40k psi power package with single, dual or triple lance setups. See page 35.

Lancing System **NEW** Technical Support

We have several new Lancing System support materials, including a presentation covering assembly procedures, a brochure outlining the recent upgrades, and action clips of the assembled system. It's all available at stoneagetools.com or we can send materials to you.

NEW
New dual coils & guide blocks

NEW
New, stronger rear support design

STEP 4

Control Box

Remote operating controls for all air-powered functions. See page 37.

STEP 3

Positioning Units

Select the positioner and upgrade options. See page 36.
